

# Master of Infrastructure Planning and Management

*UW Department of Urban Design and Planning.*

Master the methods and management skills needed to prepare, protect and adapt the infrastructures systems that are essential to our society and quality of life.

The Master of Infrastructure Planning and Management (MIPM) is a fully accredited online degree program for working professionals throughout the nation. Our curriculum blends strategic planning and systems theory, making it unique from programs that only teach conventional emergency management methods. The MIPM program is guided by an advisory board of University of Washington faculty and professionals in the field.

## Program Benefits

- Gain in-depth knowledge on several vital infrastructure systems such as water, food, energy and communications
- Learn to mitigate and examine potential hazards with methods such as geospatial analysis, epidemiology and risk assessment
- Explore the impact from an array of threats that range from climate change to cyberterrorism
- Focus on strategic thinking and leadership skills
- Study online at a world-class university
- Earn your master's degree while employed

## Career Information

The skills taught in the MIPM program lend well to positions with a wide range of public and private sector organizations, at the local and national scale, that deal with the following issues:

- Emergency management
- Disaster preparedness
- Public health
- Security
- Infrastructure planning, management and protection
- Law enforcement
